

Climate Threats to Stakeholders – Using GIS to Bridge the Gap

Dr. Jill Trepanier

Geography and Anthropology, Louisiana State University

April 25 Western States Caucus Roundtable discussion

Main Takeaway Points

1. Digestible science communication is the future.
 2. Scientists must become proficient in communicating in multiple ways to multiple audiences with varying skill levels
 3. The future should be about solutions, not problems.
 4. Multidisciplinary teams are required to answer the most complicated climate threat questions.
- 

Meet the Presenter

Five Projects - Meet the Stakeholders

- Native American Tribal land and resource loss in the Mississippi River Delta region
- *Native American Tribal fishery changes (new)*
- U. S. Galleries, libraries, archives, and museums
- *South Louisiana farmers (new)*
- Middle and high school environmental science teachers and students

What current culturally sensitive sites will be threatened for the Chitimacha and other neighboring Tribal peoples into the future in the MS River Delta region?

Question 1

Team Members: Dr. Kory Konsoer (LSU), David Watt (Tulane, PhD Candidate), Dr. Mark Rees (ULL), Dr. Navid Jafari (LSU), Dr. Chris Rodning (Tulane), Reilly Corkran (LSU, MS Student)

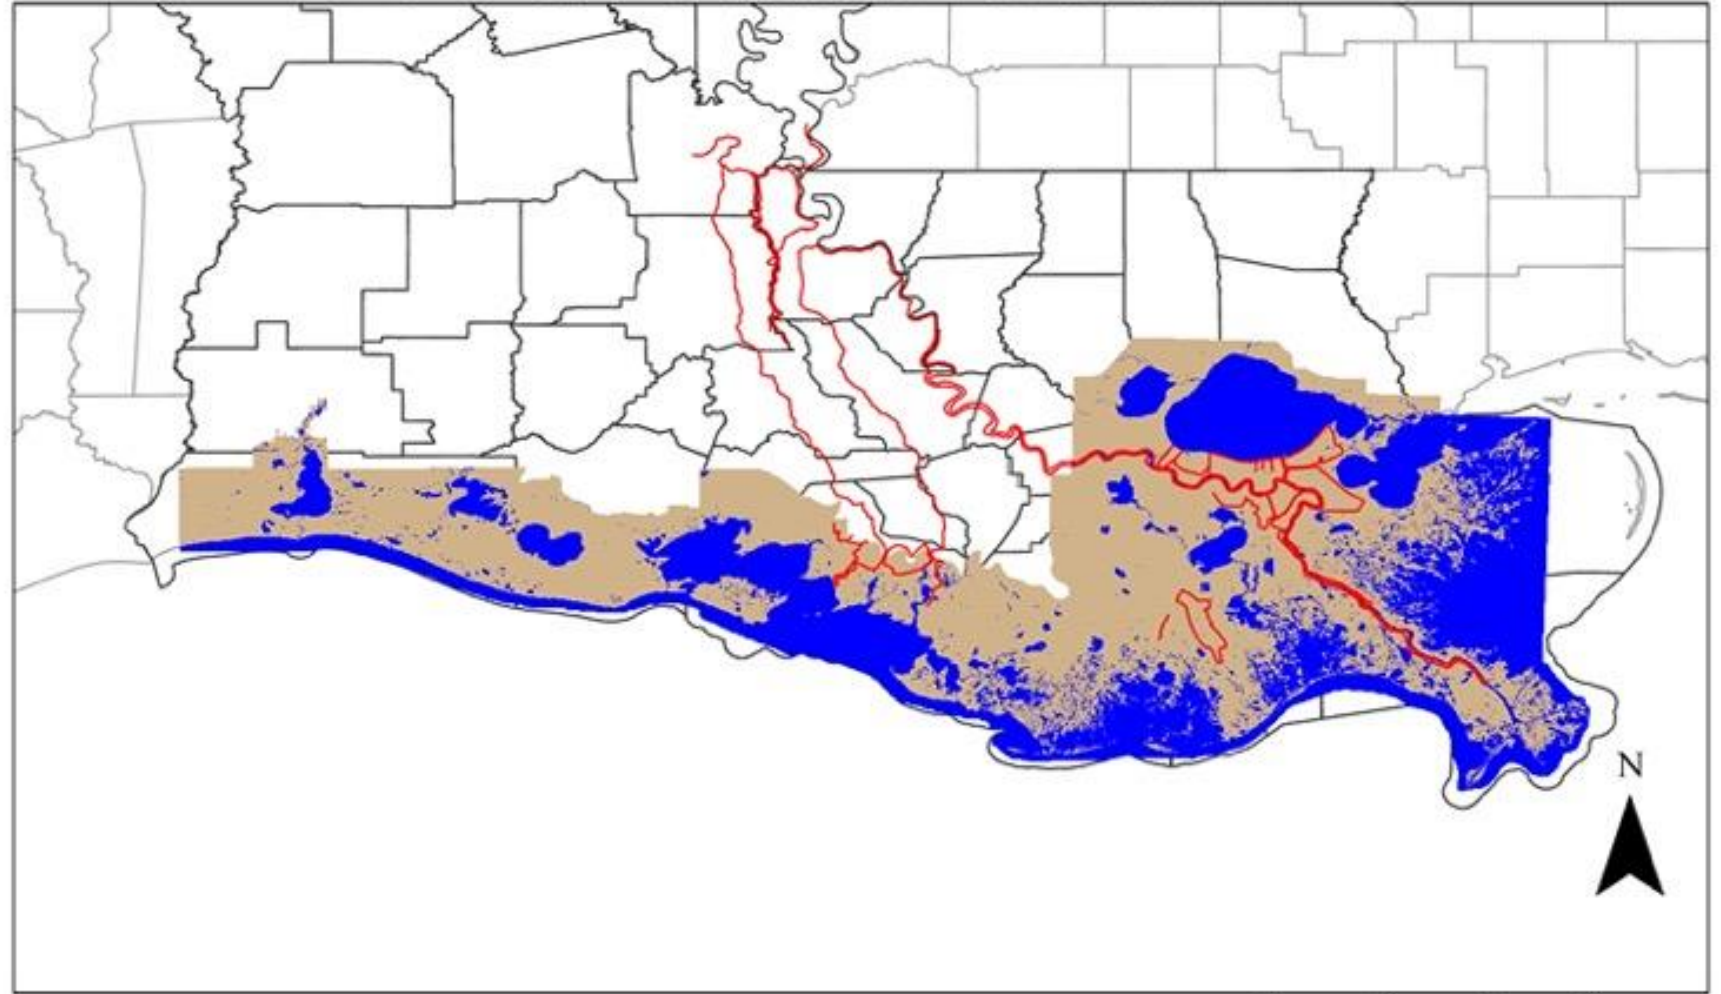

Coastal erosion, land subsidence, and sea level rise are destroying cultural resources along the Gulf Coast.

- Most adverse effects are occurring in the Mississippi River Delta region
- Working with Native American Tribes (i.e., Chitimacha), incorporating traditional ecological knowledge to future expectations of impacts

Q1: Background

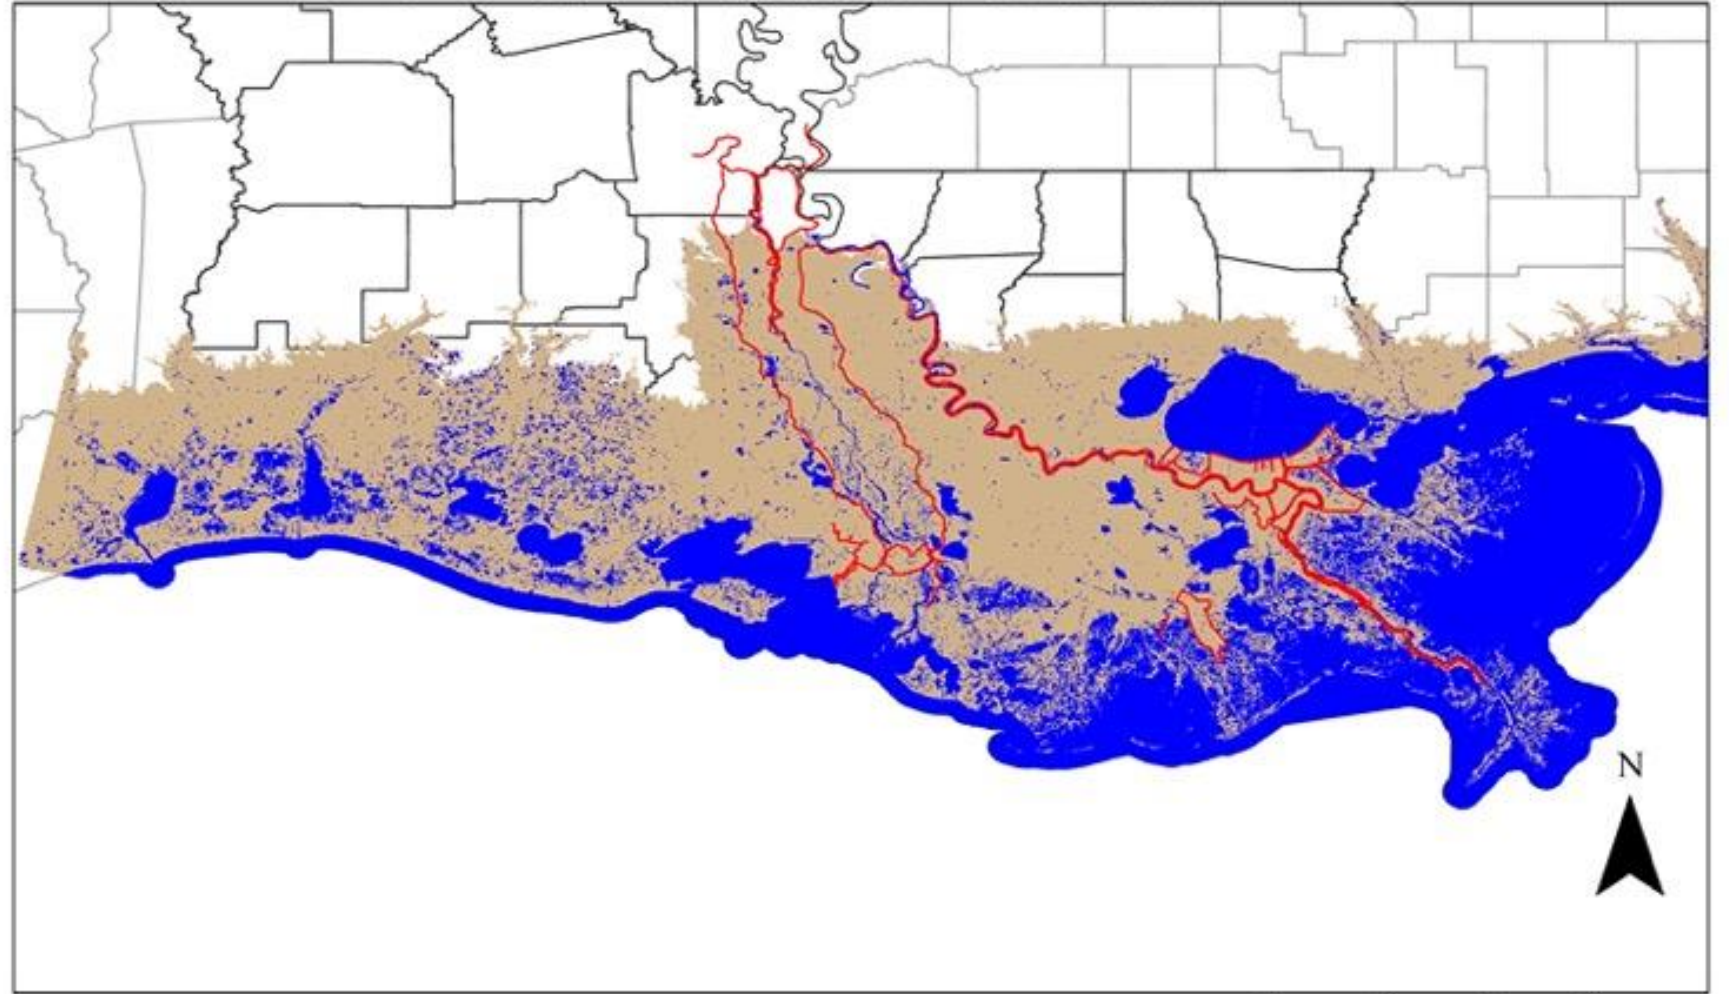

Q1 Threats: Land Loss 1932

Land Loss on the Coast of Louisiana for 1932

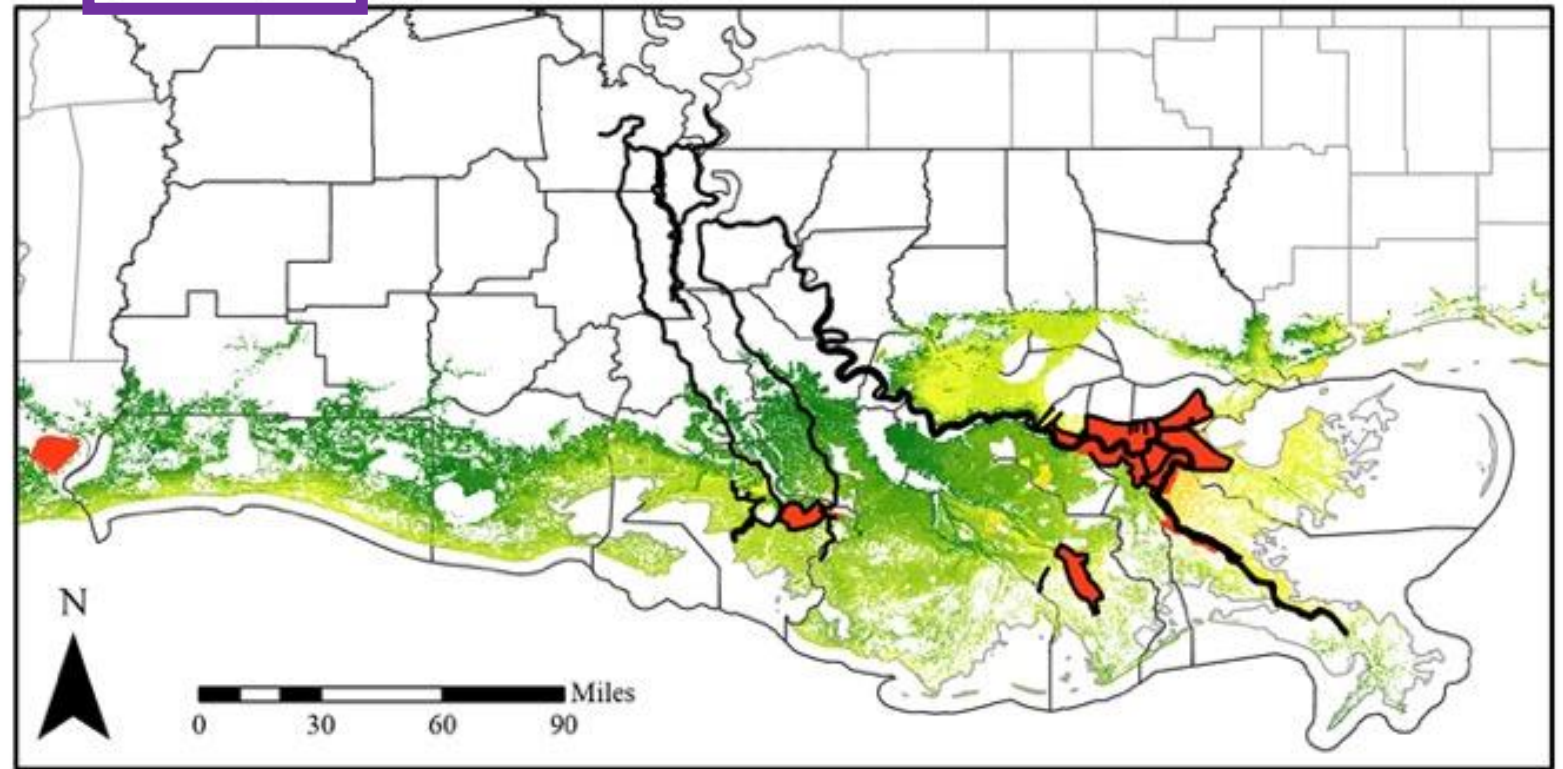

Q1 Threats: Land Loss 2016

Land Loss on the Coast of Louisiana for 2016

Q1 Threats: Hurricane Storm Surge

Category 1 Storm Surge Inundation in the State of Louisiana

Legend

— Levees

00 to 01 foot above ground

01 to 02 feet above ground

02 to 03 feet above ground

03 to 04 feet above ground

04 to 05 feet above ground

05 to 06 feet above ground

06 to 07 feet above ground

07 to 08 feet above ground

08 to 09 feet above ground

09 to 10 feet above ground

10 to 11 feet above ground

11 to 12 feet above ground

12 to 13 feet above ground

13 to 14 feet above ground

14 to 15 feet above ground

15 to 16 feet above ground

16 to 17 feet above ground

17 to 18 feet above ground

18 to 19 feet above ground

19 to 20 feet above ground

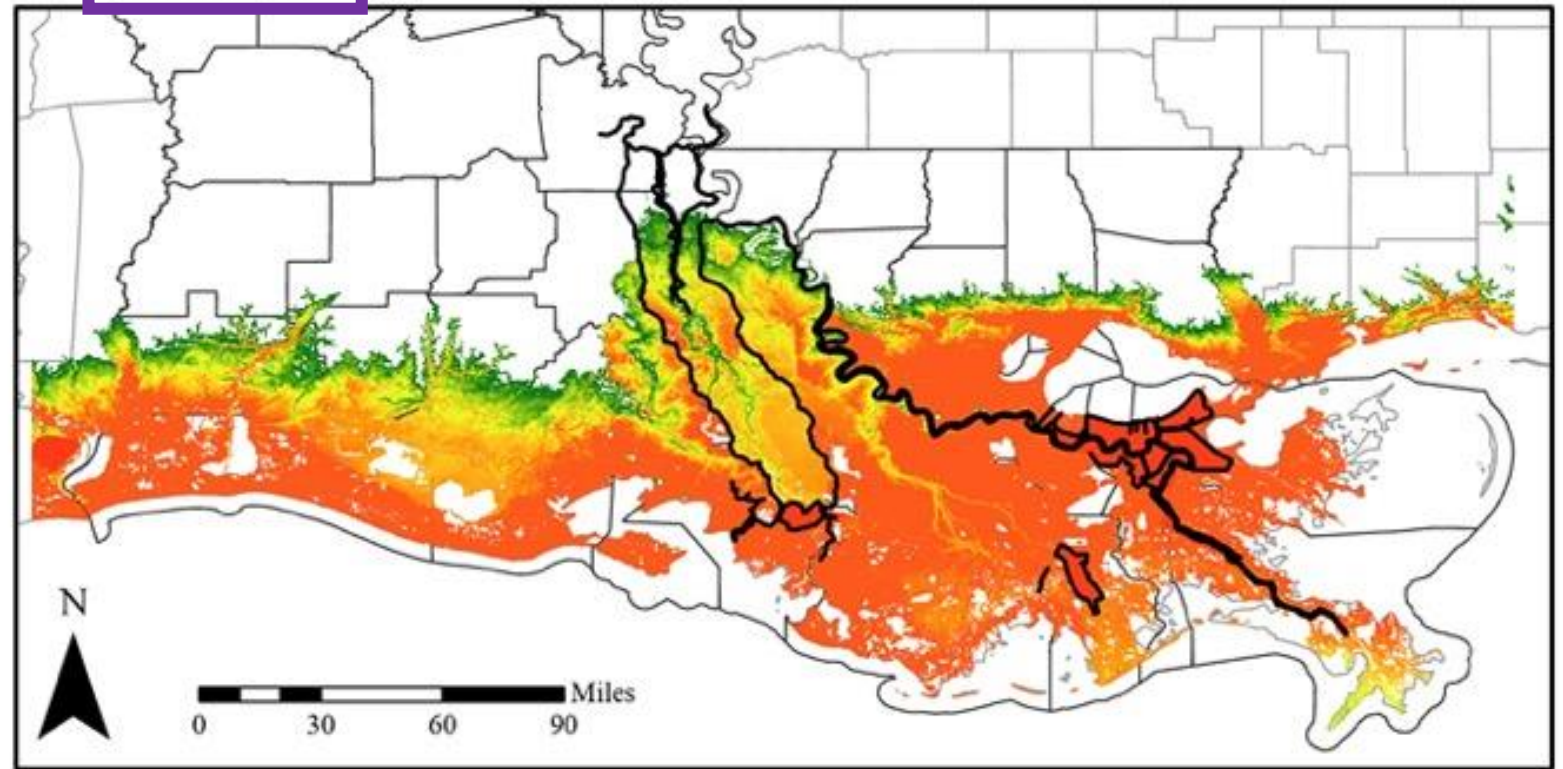

Greater than 20 feet above ground

Levee Areas - Consult
Local Officials for flood
risk

Parishes

Q1 Threats: Hurricane Storm Surge

Category 5 Storm Surge Inundation in the State of Louisiana

Legend

— Levees

00 to 01 foot above ground

01 to 02 feet above ground

02 to 03 feet above ground

03 to 04 feet above ground

04 to 05 feet above ground

05 to 06 feet above ground

06 to 07 feet above ground

07 to 08 feet above ground

08 to 09 feet above ground

09 to 10 feet above ground

10 to 11 feet above ground

11 to 12 feet above ground

12 to 13 feet above ground

13 to 14 feet above ground

14 to 15 feet above ground

15 to 16 feet above ground

16 to 17 feet above ground

17 to 18 feet above ground

18 to 19 feet above ground

19 to 20 feet above ground

Greater than 20 feet above ground

Levee Areas - Consult
Local Officials for flood
risk

Parishes

Q1: What's Next

Spring 2024

Workshops with stakeholders to hear their concerns and find ways to represent their concerns through GIS

Take existing historical data and pair with stakeholder knowledge. Create threat scale for the Chitimacha so they can use it to help protect (or move) resources

Summer 2024

Can we create a categorical climate threat scale for galleries, libraries, archives, and museums in the United States?

Question 2

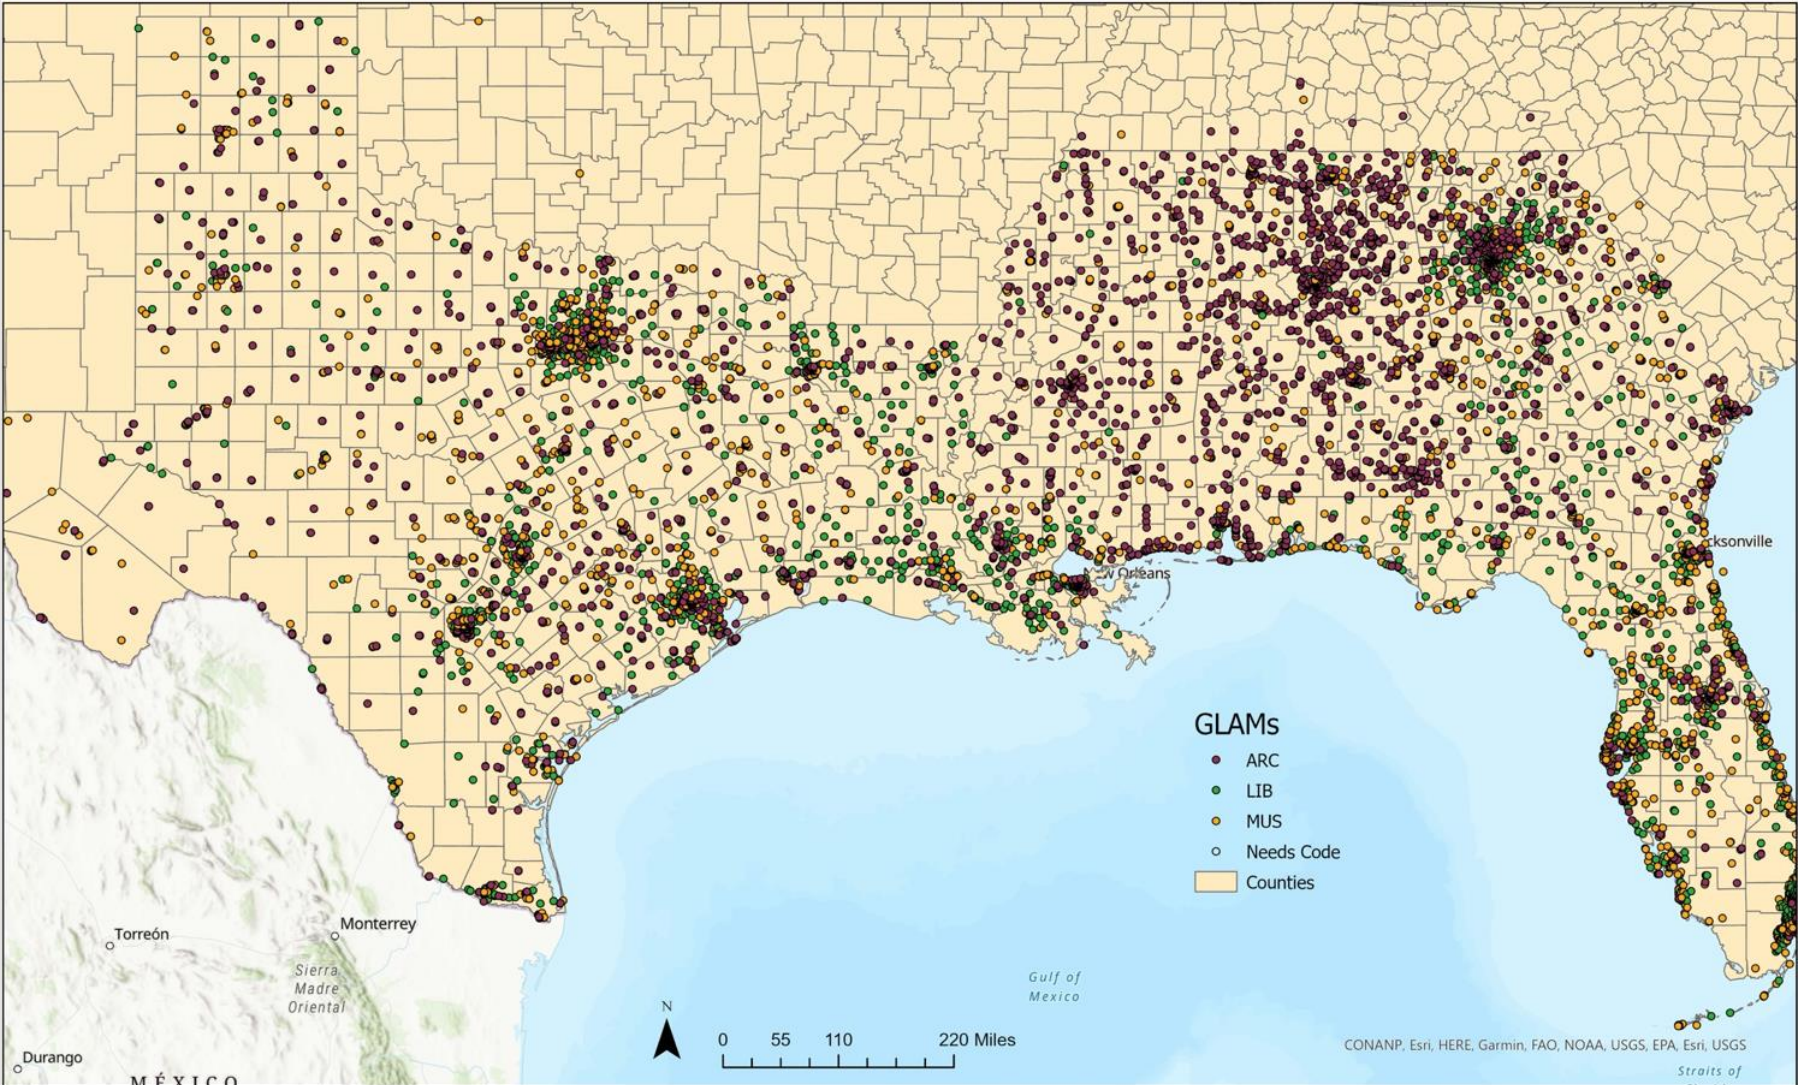

Team Members: Dr. Ed Benoit (LSU), Dr. Jenni Vanos (ASU), Emily Fisher (LSU, MS Geography Student), Haley Moore (LSU, MA SIS Student), 35 undergraduate students

Q2: Background

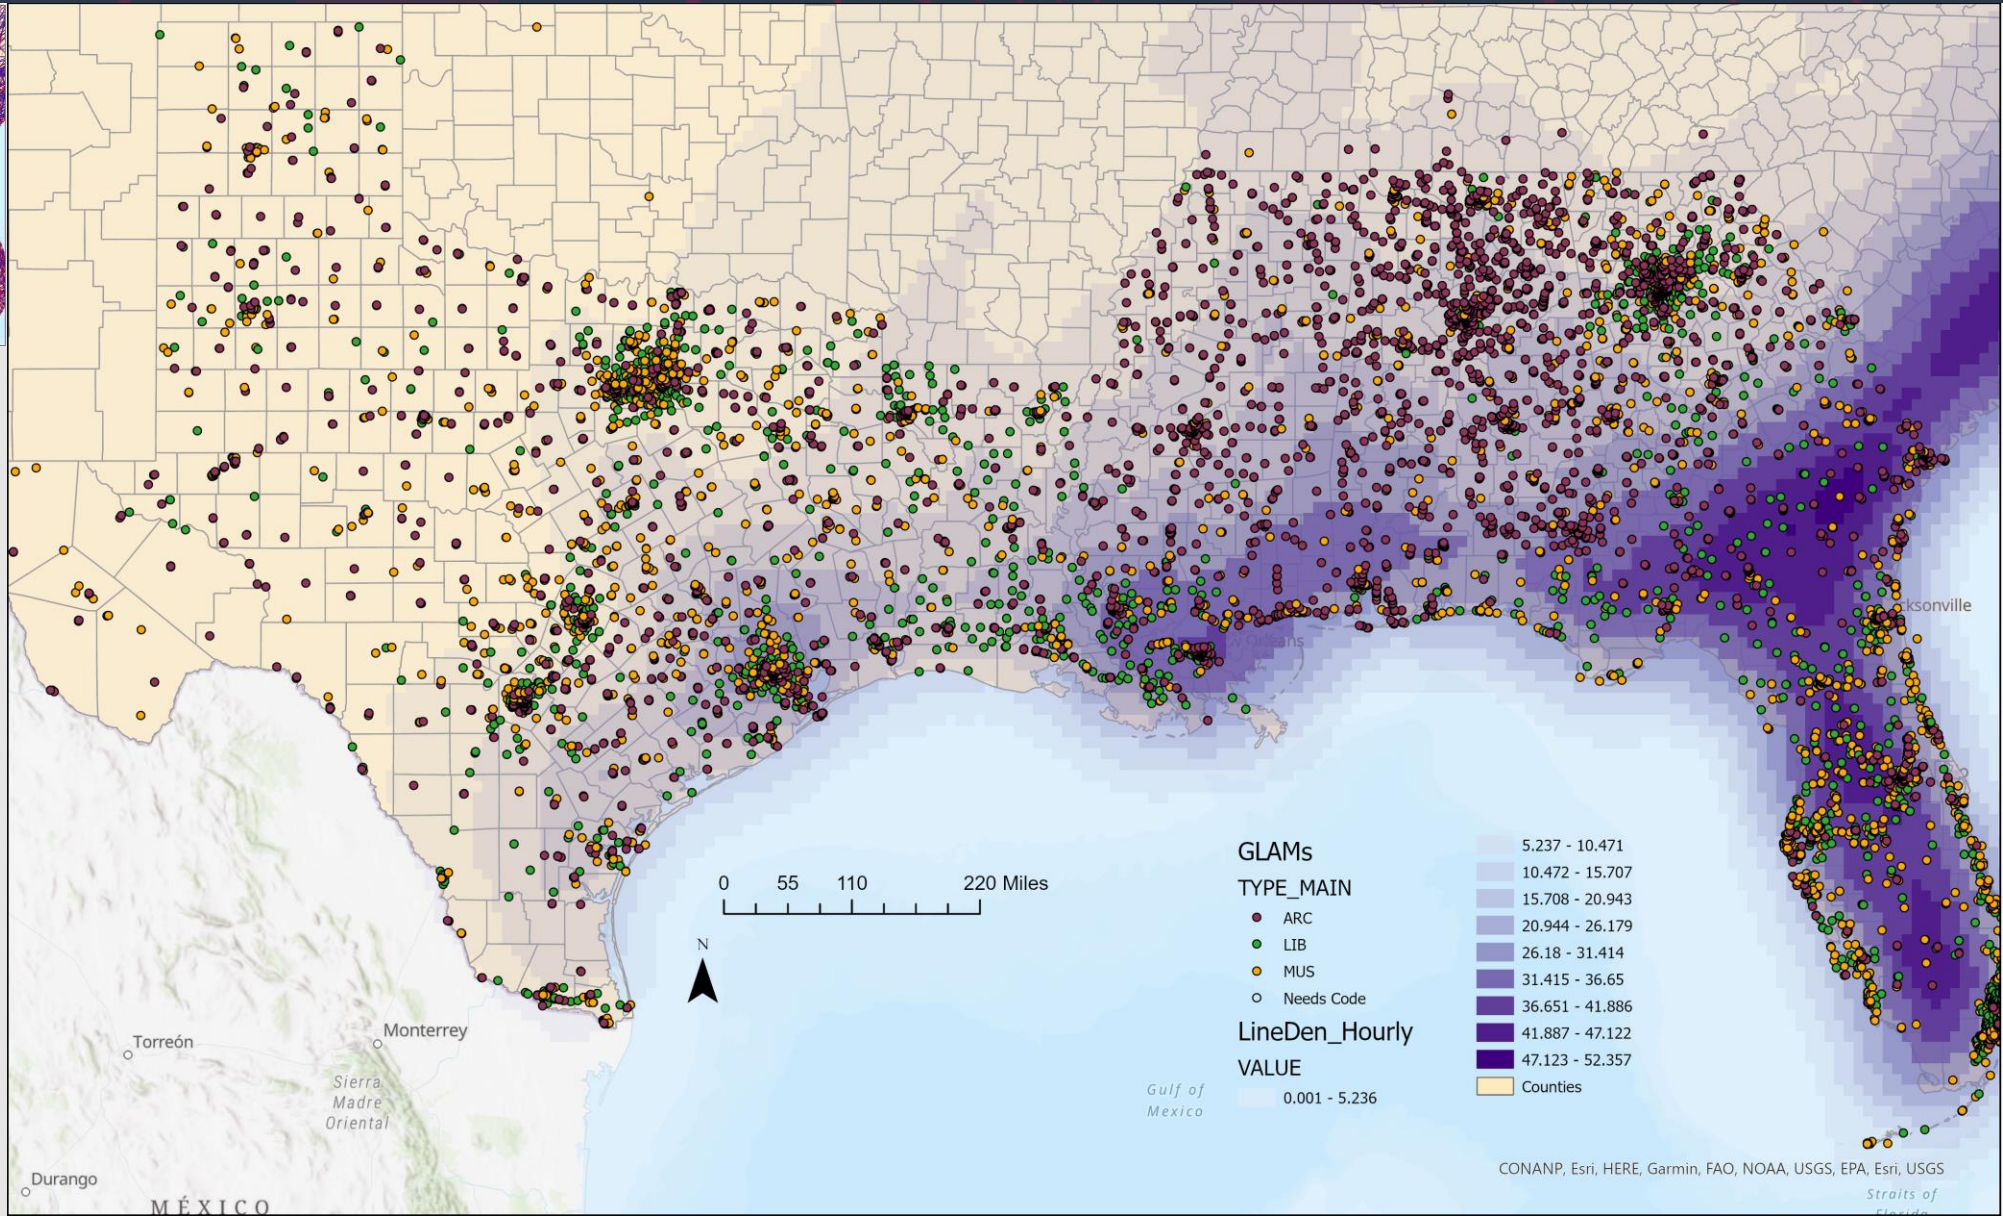

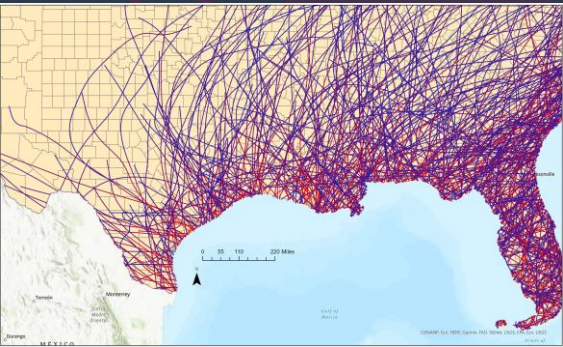

- Project_ARCC: Archivists Responding to Climate Change (2015)
- Mazurczyk, Tara, Nathan Piekielek, Eira Tansey, and Ben Goldman. "American Archives and Climate Change: Risks and Adaptation." *Climate risk management* 20 (2018): 111-125. <https://doi.org/10.1016/j.crm.2018.03.005>
- Baton Rouge Flood (2016) & Hurricane Ida (2021)

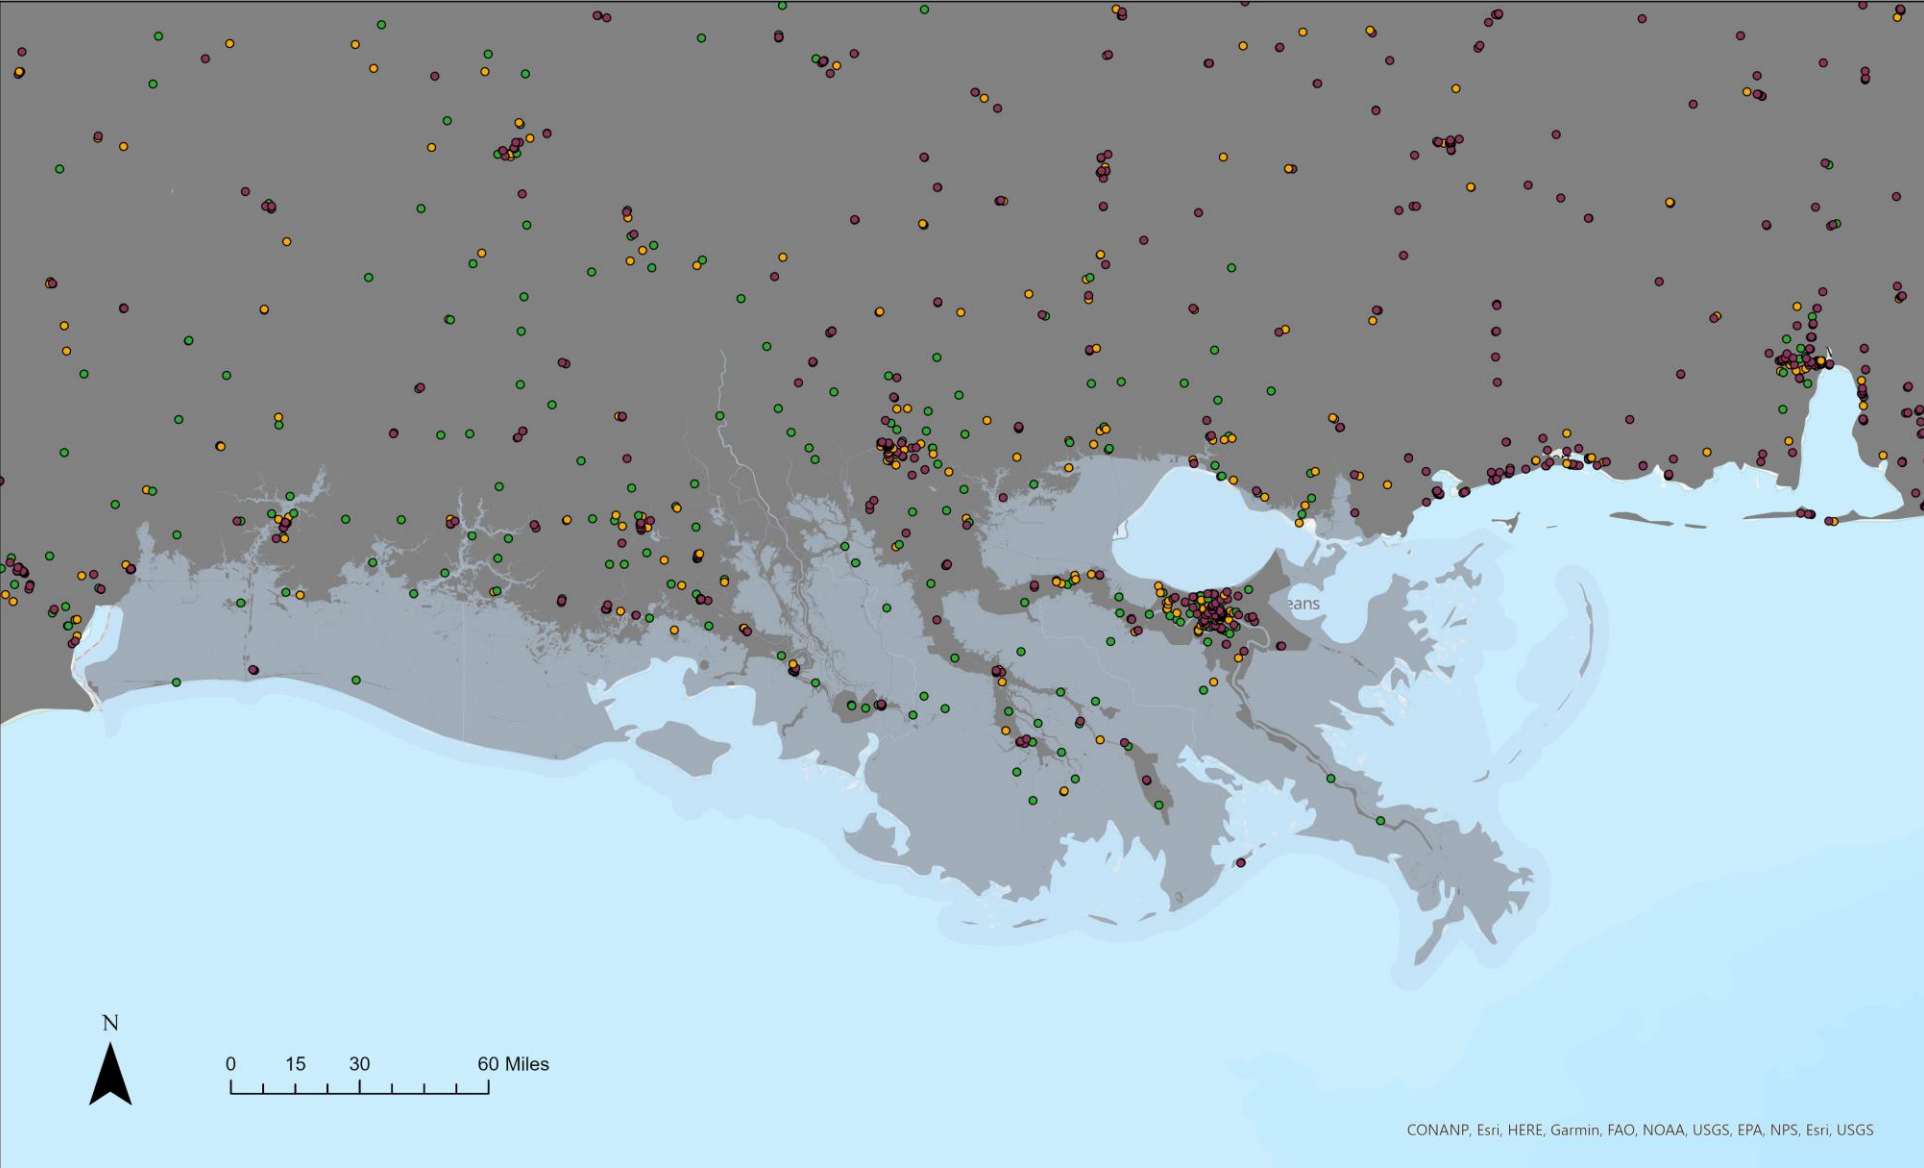

Q2 GLAM Locations

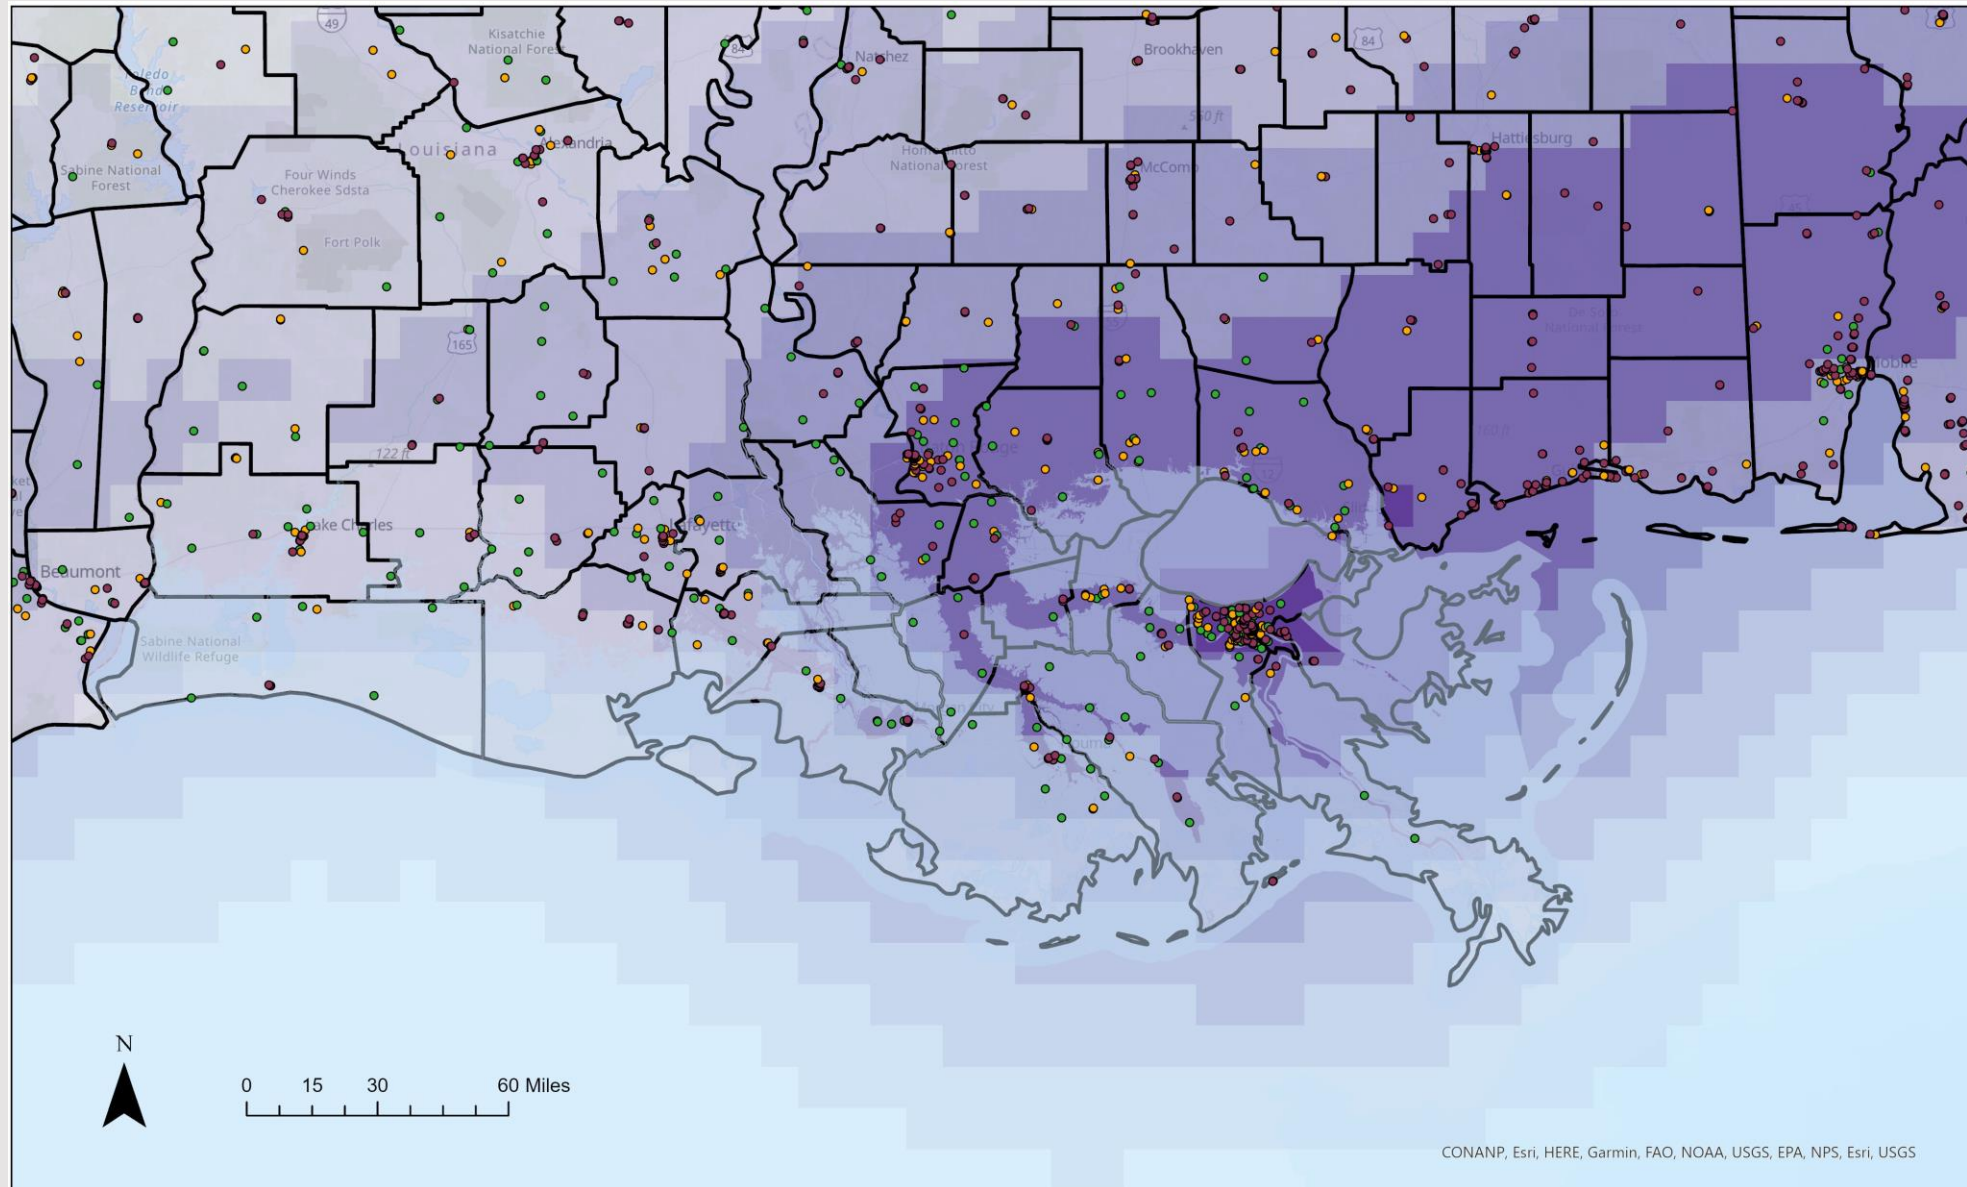

Q2 Threats: Hurricane Frequency

Q2 Threat: NOAA Projected Sea Level Rise - 3 feet

Q2 Combining Threats

Q2: What's Next

Spring 2024

Continuing to identify threats including:

- Varying category hurricanes and TC rainfall
- Heavy rainfall/flooding
- Humidity
- Extreme heat/cold

Project Year 3

Institute at LSU to showcase product, gain feedback, and create ideas for next steps

Create threat scale, GIS Experiences, and GIS Portal for stakeholder use

Summer and Fall 2024

Q2: Project Website and Example Story Map

Example Story-Map

How can I bring extreme weather information to Louisiana schools to enhance environmental science learning?

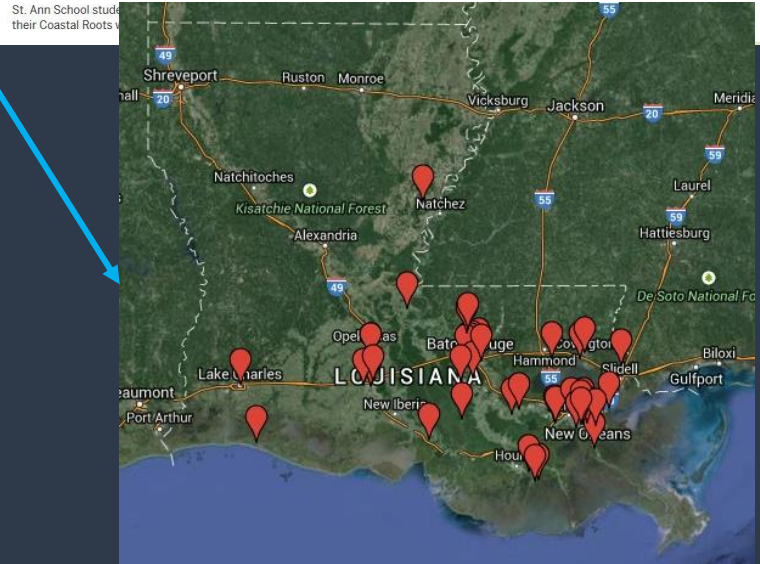

Question 3

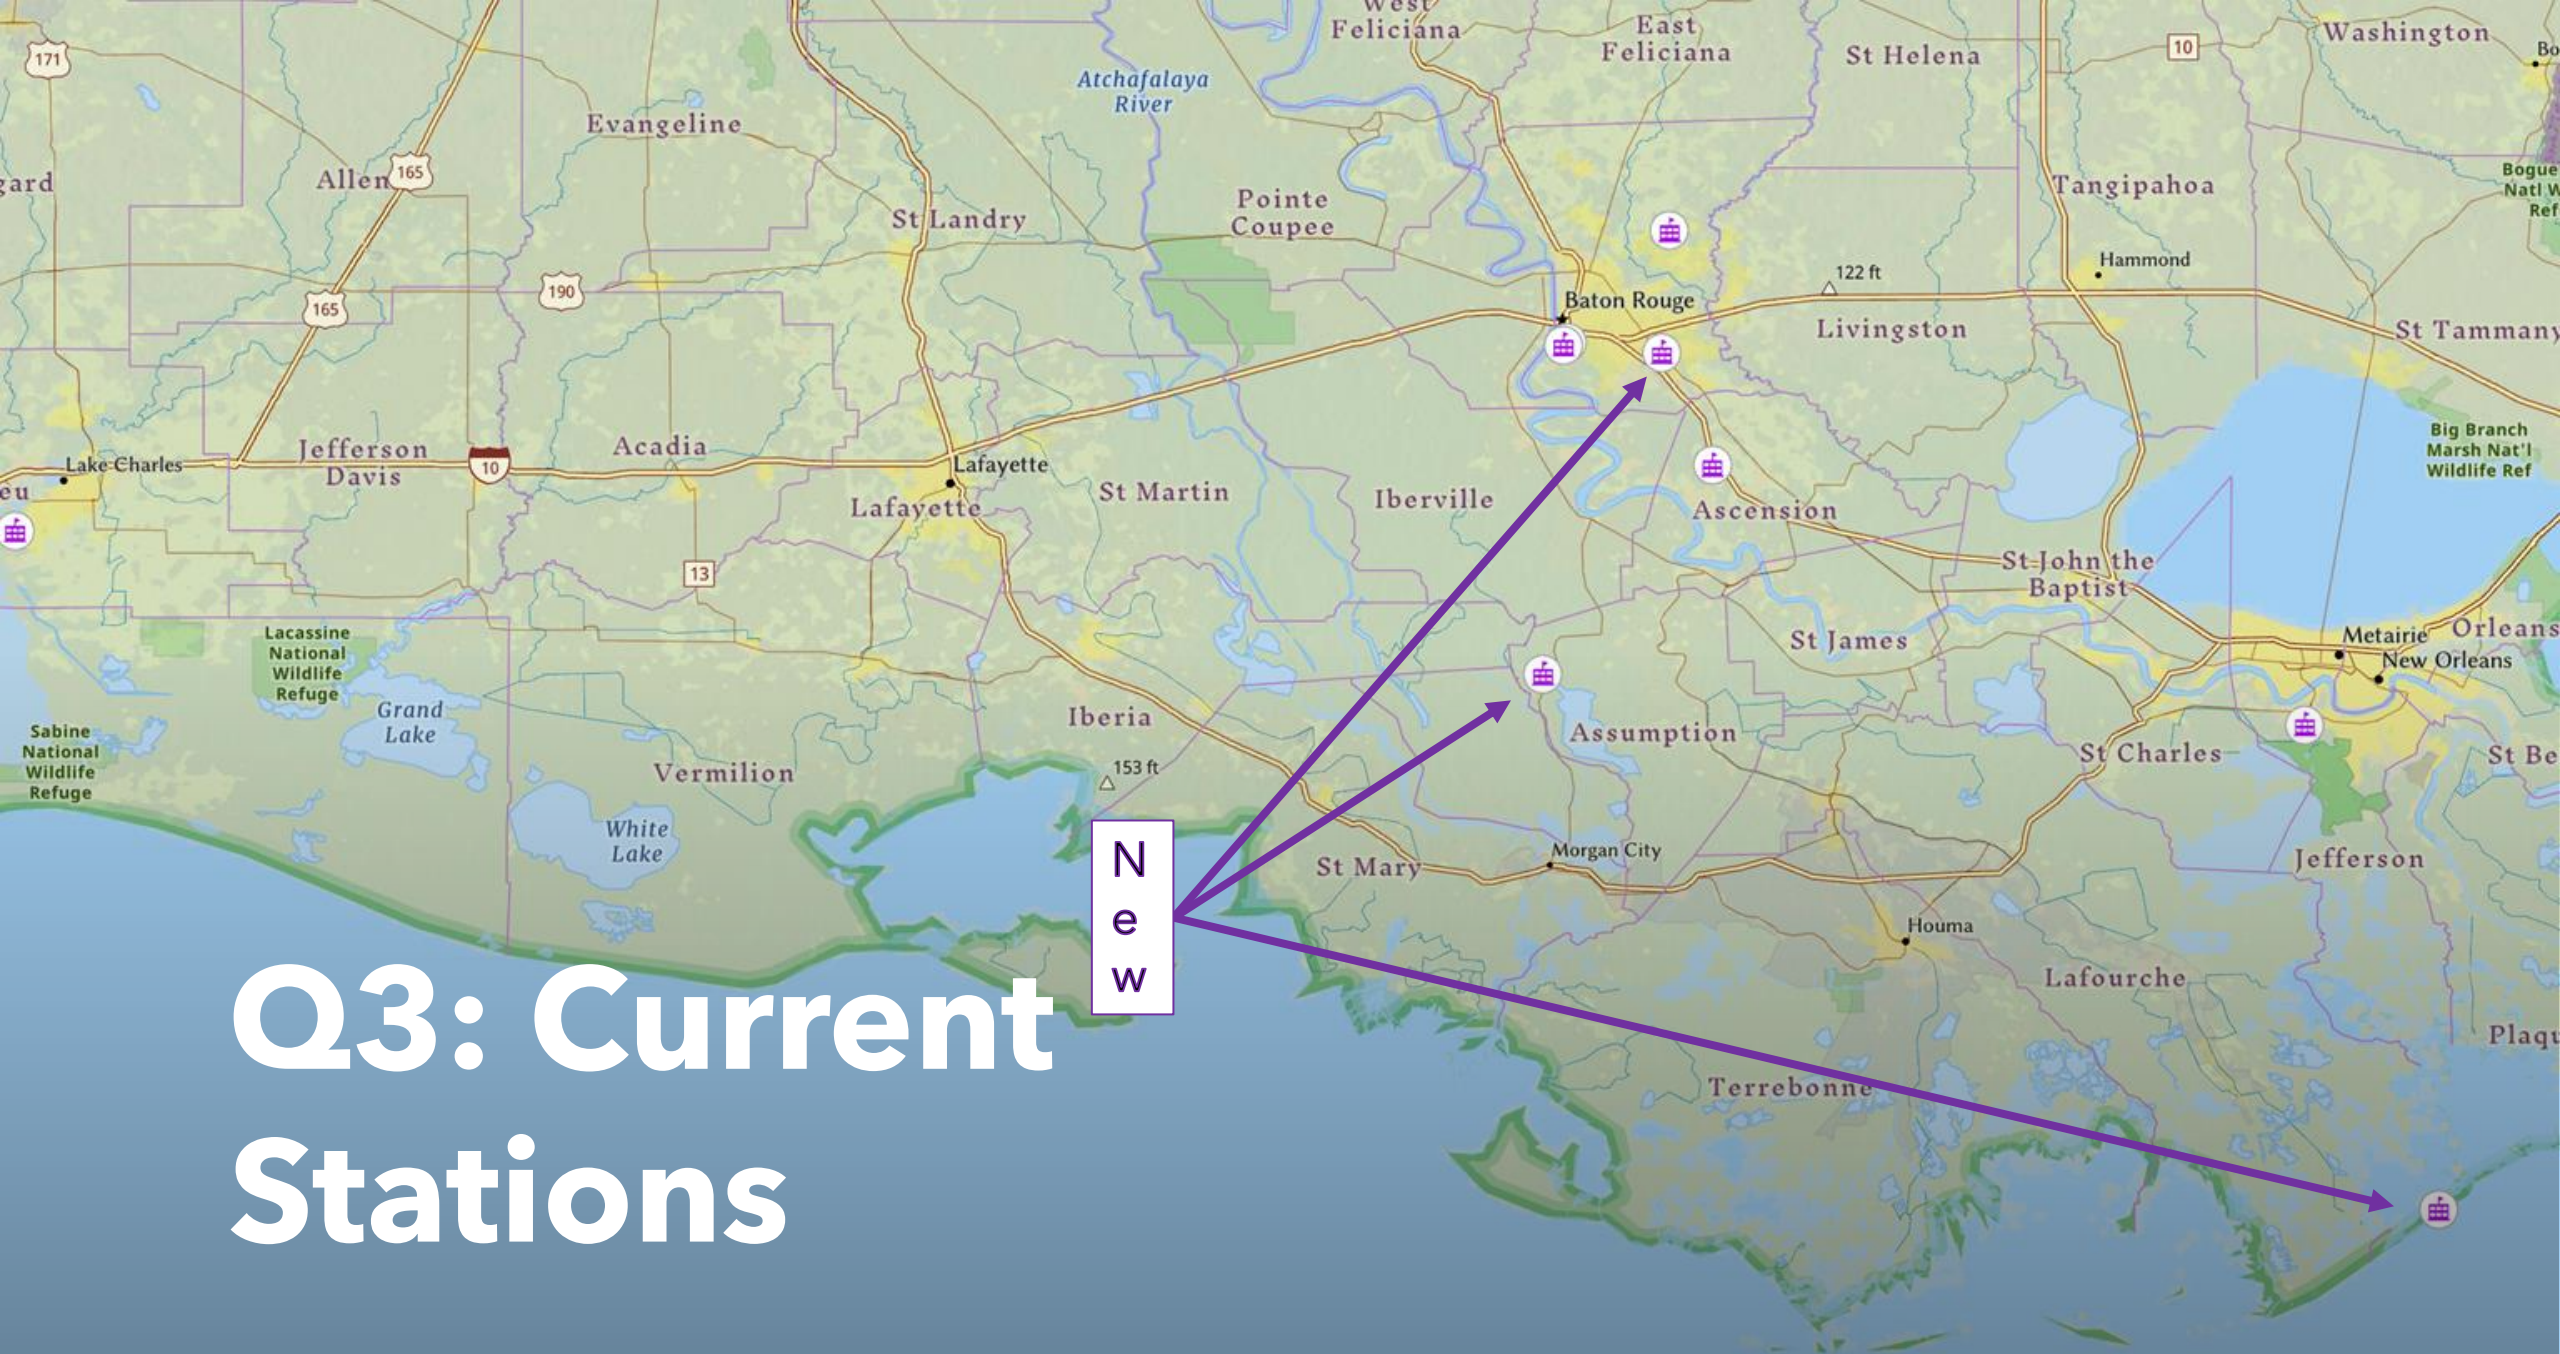

Team: Little ol' me (and all my teachers!)

Q3: Background

- Two things happen simultaneously:
 1. Louisiana Sea Grant Project with LSU Coastal Roots from 2018-2021 *I met some teachers*
 2. I begin to slowly collect "leftover" money and install a station on LSU campus in 2018
 1. Followed by one more near my home in 2021 prior to Ida
 2. And another at a middle school in early 2022 (bc, why not?).
 3. And two more at two high schools in late 2022; and another at LSU (across campus) in 2022.
 4. Now...I have a plan...enter four more...

Metairie's St. Ann School students grow and then plant trees for coastal restoration

Q3: Current Stations

Q3: Goodies for Teachers

Q3: What's Next

Summer 2024

Find Funds!

Side Project: McNair student will assess summer 2023 temperature and pressure data from stations and compare to historical data to be sent out for review in Summer 2024

 **Future - ?**

Main Takeaway Points

Digestible science communication is the future.

Scientists must become proficient in communicating in multiple ways to multiple audiences with varying skill levels

The future should be about solutions, not problems.

Multidisciplinary teams are required to answer the most complicated climate threat questions.

Thank you for your attention!

Any questions??
